Jorge Joshua Neyra Caldas

jorge.joshua0124@gmail.com +51969434766 Lima, Peru

SUMMARY

Full Stack & AI Engineer with 8+ years of experience developing enterprise applications and AI-enabled solutions. Expertise in **Python**, **RESTful APIs**, **LLMs**, **Generative AI**, **Angular**, **.NET/C#**, and **ASP.NET** Experienced in building scalable architectures, leading engineering teams, and delivering production-ready software across AI, fintech, and retail domains.

SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, HTML5, CSS3, Angular, Vue.js
Backend: Node.js, Express, Nest.js, Python, FastAPI, Flask, Java, Spring Boot, PHP, RESTful APIs
AI/ML & LLMs: SFT, RLHF, RLMF, Prompt Engineering, RAG Architectures, LangChain, Generative AI, Agent Workflows
Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis, Kafka
Cloud & DevOps: AWS, Docker, Kubernetes, Terraform, GitHub Actions, CI/CD Pipelines
Testing & Quality: Jest, pytest, JUnit
Blockchain & Web3: Web3.js, Solidity, Ethereum, Truffle, Smart Contracts, NFT Development, CertiK Audit

PROFESSIONAL EXPERIENCE

Senior AI Software Developer 03/2023 – 05/2026 | Palo Alto, USA
Symphony AI

- Built and maintained **Python-based backend services and AI-enabled applications**, supporting enterprise data pipelines and software components used across predictive, generative, and agentic AI workflows.
- Developed robust **RESTful APIs** and service integrations connecting AI applications with enterprise data sources, business workflows, knowledge graphs, and downstream services.
- Designed scalable software architectures for enterprise AI applications, integrating **data pipelines, AI models, knowledge graphs, orchestration services, and agent-based workflows** to support production-scale vertical AI solutions.
- Developed and integrated AI capabilities using **LLMs, predictive models, generative AI, and agentic AI**, supporting industry-specific applications across retail, financial services, industrial operations, and enterprise IT.
- Contributed to **Eureka AI**, SymphonyAI's foundational AI platform, supporting the development and deployment of industry-specific models, AI agents, and enterprise applications through shared data, orchestration, and governance capabilities.
- Developed AI-powered workflows that combined **predictive intelligence, generative AI, domain knowledge, and autonomous/semi-autonomous agents** to automate multi-step enterprise business processes.
- Led a development pod of 8 engineers, coordinating technical execution, enforcing coding standards, performing code reviews, and ensuring consistent delivery across multiple development sprints.
- Implemented **CI/CD pipelines, automated testing, containerized deployments, and application monitoring** to improve the reliability and repeatability of enterprise AI software releases.
- Designed, built, and maintained full-stack features across AI-enabled enterprise applications, integrating backend services, APIs, data-processing components, and user-facing workflows.
- Developed and enhanced backend services supporting **enterprise onboarding, authentication, transaction processing, investigations, operational workflows, and AI-assisted decision-making** across SymphonyAI's vertical AI applications.

Software developer 07/2020 – 02/2023 | Lima, Peru
Software Enterprise Services(SES)

- Developed and maintained **enterprise web applications** for financial, administrative, payroll, and business-management operations, supporting corporate clients through SES's software-factory services.
- Built responsive business interfaces using **Angular**, integrating frontend components with backend services to support financial reporting, payroll processing, employee benefits, profitability calculations, and administrative workflows.

- Implemented backend services using **ASP.NET Web API** and **.NET/C#**, developing RESTful APIs and business logic for enterprise applications and integrating frontend systems with existing business infrastructure.
- Optimized database queries and application processes for **financial calculations and reporting**, improving application performance and supporting efficient processing of enterprise data.
- Developed an **enterprise payroll-management system**, delivering configurable functionality, secure processing, an intuitive user interface, and additional features to support evolving business requirements.
- Developed a **digital-signature desktop application** using **.NET/C#**, PDFium Viewer, and iTextSharp, enabling electronic document-signing workflows and integration with business document processes.
- Built a **web-based requirements-management application** for managing requests, worked hours, reports, and billing, supporting project and service-management operations.
- Implemented **automated testing and CI/CD workflows using GitLab**, while participating in code reviews, technical discussions, and software-development activities to maintain application quality, security, and reliability.

Software engineer 07/2018 – 04/2020 | Lima, Peru

Retail Custom Solutions

- Developed and implemented **retail software solutions** supporting sales, inventory management, promotions, customer management, and point-of-sale operations for enterprise retail clients.
- Implemented **electronic invoicing functionality** for **Belcorp's sales system**, integrating electronic billing processes into the company's retail sales operations.
- Enhanced the **RCS Tools** mobile application, providing secure, real-time access to RMS.NET data and enabling users to consult stock information and perform daily retail operations more efficiently.
- Released the **Physical Inventory module** and optimized the application's user interface, expanding RCS Tools' capabilities for retail inventory operations.
- Added an **Employee PIN module** to RCS Tools, extending the application's functionality for retail workforce operations.
- Supported the development and implementation of **RMS/POS retail systems for Belcorp**, providing functionality for sales and retail-management operations.
- Contributed to retail software solutions covering **point of sale, inventory control, promotions, customer management, electronic invoicing, and mobile inventory operations**.
- Worked on software solutions designed for integration with **existing enterprise systems, POS platforms, e-commerce systems, and electronic-invoicing services**, supporting the company's broader retail technology ecosystem.

EDUCATION

Bachelor's Degree / Computer Science 2014 – 2018 | Lima, Peru

Technological University of Peru
